A
Biological hierarchy of endogenous editing
Tissue / cellular state
ADAR activity · processing · occupancy
realization / engagement
Inverted-Alu RNA substrate
local chemical selectivity
A
Target-centered view
local sequence + helix partner
Prediction must respect both shared substrate state
and the fate of a specific nucleotide.
B
Systematic hypothesis map
Biological context
RBP · transcript/repeat · chromatin · structure
Supervision
all high/low sites · continuous/ordinal labels
Representation
whole duplex · focal site · aligned partner
Integration
transfer · ensemble · unified end-to-end
C
Leakage-safe evidence funnel
Train
566
Valid.
139
Test
179
Five pair-disjoint folds
feature/model selection
Freeze code, weights,
thresholds, hashes
One canonical evaluation
no post-test tuning
