A
Biological hierarchy of endogenous editing
Cell / tissue state
ADAR activity · processing · regulator state
substrate realization / engagement
bulk proxies:
limited resolution
Inverted-Alu duplex: intrinsic competence
which adenosine is selected?
aligned local view:
robust increment
A
Target-local selectivity
sequence · pairing · helix partner
Observed editing
B
Systematic hypothesis map
Biological context
RBP · transcript/repeat · chromatin · structure
Supervision
all high/low sites · continuous/ordinal labels
Representation
whole duplex · focal site · aligned partner
Integration
transfer · ensemble · unified end-to-end
C
Leakage-safe evidence funnel
Train
566
Valid.
139
Test
179
Five pair-disjoint folds
feature/model selection
Freeze code, weights,
thresholds, hashes
One canonical evaluation
no post-test tuning
