A
Biological hierarchy of endogenous editing
Intrinsic duplex properties
sequence + predicted
secondary structure
Cell / transcript state
processing + ADAR
regulators
well captured by the
whole-duplex graph
bulk proxies:
limited resolution
Substrate available to editing
editing burden + geometry provide an indirect readout
which adenosine is selected?
target alignment
improves prediction
Target-local selectivity
sequence · pairing · helix partner
Observed editing
B
Questions tested
Biological context
RBP · transcript/repeat · chromatin · structure
Supervision
all high/low sites · continuous/ordinal labels
Representation
whole duplex · focal site · aligned partner
Integration
transfer · ensemble · unified end-to-end
C
Leakage-safe evaluation
Train
566
Valid.
139
Test
179
Five pair-disjoint folds
feature/model selection
Freeze code, weights,
thresholds, hashes
One canonical evaluation
no post-test tuning
