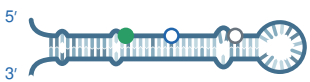
A Sites within substrates

COMPLETE INVERTED-Alu PAIR



one partition / resampling unit

Labels at individual adenosines

Edited	≥15%
Nonedited	<1%
Intermediate	excluded

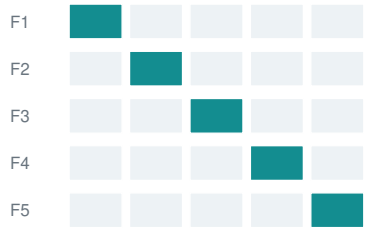
884 pairs · four individual tissues

Combined is a pooled endpoint

Structure and site marks are schematic.

B Development comparisons

705 DEVELOPMENT PAIRS



Common reference — **Candidate**

Same held-out pairs

Effect + pair-clustered interval

Matched / falsification controls

Adaptive discovery; screen exceptions in SI.

C Frozen held-out evaluation

RESTORE PUBLISHED SPLIT ROLES

Train	Validation	Test
566 pairs	139 pairs	179 pairs
fit weights	checkpoint / threshold	unseen pairs

FROZEN SPECIFICATION

weights · preprocessing

thresholds · fixed combination

One final evaluation

Frozen synthesis only

No branch selection on the canonical test.
