A Sites are nested within complete RNA substrates

ONE COMPLETE PAIR **884 PAIRS**

inverted-Alu RNA substrate

one partition and resampling unit

SITE OBSERVATIONS WITHIN THE PAIR

EDITED ≥ 15% · NONEDITED < 1% · INTERMEDIATE excluded

4 TISSUES

individual endpoints

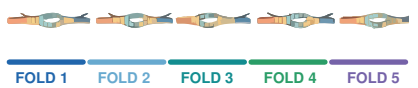

COMBINED

pooled endpoint

Pair identity is preserved in every split and interval.

B Discovery asks whether a branch adds information out of fold

DEVELOPMENT POOL **705 PAIRS**

pair-disjoint outer folds · each pair held out once

SAME HELD-OUT PAIRS

COMMON REFERENCE

CANDIDATE BRANCH

PAIRED EFFECT

with uncertainty

pair-clustered interval

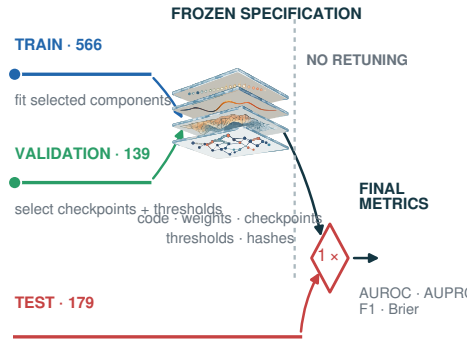

MATCHED OR FALSIFICATION CONTROLS

randomized · shifted · capacity-matched controls, where applicable

Adaptive discovery evidence · canonical test inaccessible

C The frozen synthesis enters the held-out test once

PUBLISHED SPLIT ROLES RESTORED

One evaluation confirms the synthesis—not each branch.

Train fits; validation fixes checkpoints and thresholds.
