A

A layered map of recoverable information

B

Controlled questions, not model parts

1. **BIOLOGICAL CONTEXT**
   Do measured cellular annotations add residual information?
2. **SUPERVISION**
   Does respecting duplex organization alter what is learned?
3. **REPRESENTATION**
   What is lost between global duplex and focal-site views?
4. **GENERALIZATION**
   Which determinants transfer, and where do they fail?

C

Evidence was separated from final validation
