Tissue-dependent editing overlays stable substrate rankings
A
Matched sites change across tissues
50,162 sites observed in all four tissues
54.6%
32.0%
22.8%
17.4%
Sites at or above range (%)
Within-site EditingIndex range (percentage points)
B
Strict state switches are asymmetric
Edited tissue (≥15%)
Nonedited tissue (<1%)
Artery
Brain
Liver
Skeletal muscle
33 (4.9)
157 (29.1)
840 (120.9)
3 (0.4)
60 (11.7)
415 (63.3)
0 (0.0)
11 (2.2)
190 (35.7)
0 (0.0)
1 (0.2)
0 (0.0)
Switches per 10,000 shared sites
C
Substrate rankings remain correlated across tissues on identical site sets
Artery–Brain
Artery–Liver
Artery–Muscle
